We haven't done a VHF contest in a few years and this is #1 from a new location in FN22. Antennas went up the week before and we had no idea what was working or not until we got started in the contest. Turned out, most everything was working, but we we had voltage sag problems from a generator sized about 1/2 what we really needed. Lots of funny things happened when things would sag on 1296.....

One tower + a temp tower for 6.

6M - IC 756PRO and ~600W - 5EL @ 40'  
2M - IC 746PRO and ~ 600W - 5WL @ 70'  
432 - K3/Transvert ~400W - FO25 @ 78'  
1296 - IC 756PRO/Transvert ~ 80W = 4x looper @ 74'

We hope to be on in September with a couple more bands and a bigger generator.

Lots of fun.

Jeff
