1B-Battery from EN32. Early on, I changed the exchange message to send "IA" two times. It didn't help!

Very fun, and a long time since I've done anything like this. If I had two good batteries, I could have stayed on longer Sat nite, but needed battery reserve in the morning.

I actually made at least one more CW 6 meter QSO, but forgot to log it in my excitement about trying to work guys on 6. Way too much time spent there trying to DX with a 40 meter dipole and an HF tuner! Don't know what I was thinking working any SSB either, oh well, now I know.

The Beverages were wonderful in the summertime QRN out here, used them on 20 and lower. I called lots of stations on 80, but of course, not very many could copy me.

K3 - 5W - Vectronics Tuner
40 meter inverted vee ~ 30'
100' center fed inverted vee w/tuned feeder ~ 30'
SW and ESE short beverages
2 x 14AH batteries (one had shorted cell)- 15W solar cell
I think I will do this next year, maybe back here, maybe in WNY!
